LEVEL 6 STUDENT-BABM ENTERPRISE
RUBAINA SHAIKH

My journey in podar World College has been extremely surprising and at the same time has also helped me learn about new things and new skills. Initially in the start of the first year I was not very outgoing and was very shy, which also led to lower confidence levels for every event or participation in the college. But as I was given more and more opportunities to express myself and also build up my confidence level by performing various responsibilities for hosting various events and at the same time making sure that I'm a part of every co curricular activity that takes place in college.

One of the turning points in my journey was when the BABM enterprise course was introduced for our students, and we could choose the last stream that we wanted for our last year.

I was extremely thrilled and excited by your ring that we could choose this particular course because enterprising and innovation has always been one of my strong points, and I always wanted to learn more about the same by being able to build on myself as a future and budding entrepreneur.

Having various courses, extra curricular activity and events which are specifically related to enterprising and entrepreneurs is one of the best parts about this module, and at the same time it also gives us exposure and knowledge about the various enterprising factors and responsibilities that are important for an entrepreneur to have, especially in the world of advancing trends and technology.

We have just finished a first semester and I'm looking forward for gaining more exposure towards the other modules and semester for the enterprising course and the ways opportunities at the same has for us.

Introducing specialisation streams and courses such as enterprise and marketing was one of the best opportunities that Podar World College and the University of Wolverhampton have provided us students with because this helps us build on our personal interest and at the same time get equipped and used to the knowledge and requirements in the stream, such as enterprising, where we seek scope for opportunities.
